- [X] Please charge any deficiency in fees and credit any overpayment to Deposit Account 08-0380.

REMARKS

Applicants are mindful of the large number of references that have been cited in the IDS and associated 1449 form filed herewith. These references have arisen during litigation involving patents that relate to the present application and during the normal course of prosecution of related subject matter. Applicants have cited them to fulfill their duty of disclosure. In an effort to make the review of these references more manageable for the Examiner, Applicants have provided the PTO with multiple copies of two compact discs (CDs) with the references available for electronic viewing or searching.

Applicants representative, Mr. Philip McGarrigle, has provided the CDs to Group Director John Doll, Supervisory Primary Examiners Michael Woodward and Gary Jones, and Special Examiner Cecilia Tsang (as well as many individual Examiners). The CDs given to Messrs. Doll, Woodward and Jones were for distribution to individual Examiners within their respective groups. The CDs presented to Examiner Tsang were to accompany the hard copies of the references in the IDS which are in a central location in her office for the availability of all Examiners.

Of the two CDs that make up the IDS, one contains the articles and another contains patents/published applications. The CD containing the articles is in .pdf format and can be viewed by selecting the appropriate article as discussed below. The patent CD contains text versions and versions of the patents with the appropriate figures. It is fully searchable and contains a program that has the ability to search for specific terms or to use Boolean logic to formulate more specific searches. There are links within each full text patent to the patents that are cited therein.

The vendor who prepared the patent literature CD suggests opening the REAMDE.HTML file in the root directory of the CD before use. It contains the directions for how to use the CD, as well as a hyperlink to the patent list. The CD that contains the articles suggests opening "Index" or "Index2" to view images. 1449 forms will appear which list the articles which can be opened by clicking on the hyperlinked number of the article in the left hand column.

Additionally, Applicants would like to notify the Examiner of inter party matters that relate to the present application. Two commonly owned patents US 5,744,305 and US 5,800,992 have been involved in interference proceedings. Specifically, the interferences were Interference No. 104,359 between commonly owned US 5,744,305 and Brown *et al.*, USSN 08/688,488, and Interference No. 104,358 between commonly owned US 5,800,992 and USSN 08/514,875. Both interferences were decided by the U.S. Patent Office in favor of the real party in interest, Affymetrix, Inc., the assignee of the present application. The losing party, Stanford, appealed to the Northern District of California where the case is currently pending (Case # C99-21JF). The Junior party challenged the patents on the basis of lack of enablement and written description under 35 USC §112, among other issues. The Junior party's initial

position is set out in papers (with supporting information) entitled "Request for Declaration of Interference, 37 C.F.R. §1.608" in both interferences. The initial response of Senior party Patentee is set out in papers (with supporting information) entitled "Fodor's Opposition to Brown's Rule 608(b) Request" in both interferences.

Further, US 5,744,305 and US 5,800,992 were the subject of litigation (*Affymetrix, Inc. v. Hyseq, Inc.*, US District Court for the Northern District of California, San Francisco Division, Civil Action No. C98-03192 FMS, and *Affymetrix v. Syteni, Inc. and Incyte Pharmaceuticals, Inc.*, US District Court for the Northern District of California, San Francisco, Case No. C98-4508 FMS (MEJ)). In the course of these proceedings, allegations of invalidity over prior art, lack of enablement, lack of support and inequitable conduct (relating to duty of candor, content of declarations under 37 CR §1.132, and arguments made during prosecution) were raised. These allegations are denied. Further, oppositions have been filed against a related European application EP 619,321 in the European Patent Office, and a revocation proceeding has been brought in the United Kingdom against related patents GB 2,248,840 and EP (UK) 0619 321. Collectively, these proceedings have generated a considerable number of references, which are cited in the IDS and CDs filed herewith. Applicants can provide copies of litigation documents that may be of interest to the Examiner, but have not done so due to the extensive nature of the multiple litigation and papers filed therein.

In a lawsuit that was settled with Incyte Genomics (Incyte Genomics v. Affymetrix), Affymetrix counterclaimed for patent infringement under U.S. patent 5,871,928 ('928). The '928 patent is in a family of applications related to the present application. Incyte has filed their "Initial Disclosure of Prior Art" and the references cited therein have been included in the current IDS. The lawsuit was filed in the Northern District of California, San Francisco division (Case No. C 00-3210 MJJ) and was settled in 2001.

The references cited on the attached form PTO-1449 are being called to the attention of the Examiner. Copies of the references can be found in a "Master Binder Set" originally submitted to Examiner Tsang on January 27, 2000 and supplemented on dates thereafter.

-6-

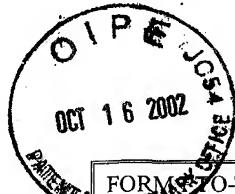

As provided for by 37 C.F.R. 1.97(g) and (h), no inference should be made that the information and references cited are prior art merely because they are in this statement and no representation is being made that a search has been conducted or that this statement encompasses all the possible relevant information.

Respectfully submitted,

HAMILTON, BROOK, SMITH & REYNOLDS, P.C.
